Premium Quality - Available Stock - OEM Level Technical Support

Kinesis manufactures/pre-aligns Deuterium lamps for independent instrument service companies and distributors. In recognizing the importance of using lamps supplied by the OEM's, Kinesis has formed strong partnerships with manufacturers who produce the majority of the lamps fitted in today's leading detectors, including the Agilent 1100 and Waters 2487 models. Bare lamps supplied directly to Kinesis are precision aligned and tested at our facility in accordance with our stringent ISO 9000 certified procedures.

All Kinesis lamps are certified recording the date of manufacture, serial number, tester's name and the intensity counts reading for future traceability. Only lamps made to the strictest tolerances receive the Kinesis Guaranteed Lamp Seal. This means that Kinesis provides lamps without any compromise on quality compared with OEM specifications. We offer a comprehensive range including the original Shimadzu SPD10A, Waters 2487 and both Agilent 1100 DAD and VWD. A range of lamps are kept in stock in the factory and our sales offices, close to our customers ensuring that when replacements are needed there is no delay.

To assist our customers with pre-sale information and after-sales support Kinesis technical team of experts now include detector lamp R&D and Applications Engineering specialist. Kinesis are able to offer a new, higher level of technical support to our customers which was previously only available to the instrument OEMs.

Premium quality lamps, available from stock with the highest level of technical support before and after the sale. Contact us today!
